1 n_nodes

```
[1]: import casadi as ca
     from casadi.tools import *
```

Let's build a trivial symbolic SX graph

```
[2]: x = ca.SX.sym("x")
     y = ca.SX.sym("y")
     z = x*y+2*y
     print(ca.n_nodes(z), " nodes in ", z)
     dotdraw(z)
```

```
5 nodes in ((x*y)+(2.*y))
```

```
[3]: z += 4*z
print(ca.n_nodes(z), " nodes in ", z)
dotdraw(z)
```

8 nodes in @1=((x*y)+(2.*y)), (@1+(4*@1))

```
[4]: z *= z+1
print(ca.n_nodes(z), " nodes in ", z)
dotdraw(z)
```

11 nodes in @1=((x*y)+(2.*y)), @2= (@1+(4*@1)), (@2*(@2+1))
